

AI Assistance Note:

I used ChatGPT as a learning and development assistant while completing this assignment. Specifically, ChatGPT was used for the following purposes:

- To help me understand the assignment requirements and clarify what was expected in Tasks 2, 3, and 4.
- To assist with brainstorming implementation approaches before I wrote my solution.
- To help debug errors encountered during development and explain why they occurred.
- To provide comments/documentation for my code in Tasks 2, 3, and 4 after the implementation was complete.
- To help draft and organize the README.md and PERFORMANCE.md documents.

All coding decisions, testing, execution of the programs, debugging process, and final verification were completed by me. I reviewed and understood the code, executed all scripts, tested the outputs, and ensured the final submission met the assignment requirements. ChatGPT was used as a learning aid and writing assistant rather than as a replacement for my own work.

For Task 1:

I used ChatGPT to help me brainstorm ideas, organize the structure of this design memo, improve grammar, and refining the wording of some sections. I reviewed and edited all the content myself before submitting it, and I understand everything included in this assignment.
